

## Modern take on a classic armchair

EFG's Evo armchair is a characteristic piece of wooden lounge furniture and 3D-knit fabric. Inspired by classic 1950s chairs and innovative designs, Evo blends in naturally in lounges, lobbies and other relaxed settings. Evo is also ideal in receptions or as a meeting chair in office spaces.

Evo has its roots in Scandinavian design and was created exclusively for EFG by Jonas Forsman. Wood meets 3D-knit textile creating a unique piece of furniture that is easy to fall in love with. This timeless armchair will elevate any room with its standout ability to blend in with the surroundings. Evo is available in light and dark models in FSC® certified\* oak and ash from responsibly produced forests. The chair comes with beige or black fabric fashioned in a single piece and with or without armrests; all designs can be combined. The broad armrests and sheer volume of the tensioned fabric make Evo sublime to relax in.

Designed to be part of the circular economy, Evo is durable and has few components, each of which can be replaced or recycled separately. The fabric is made of 100 % recyclable polyester fashioned in a single piece, thus minimizing waste during production. What's more, the spring steel fasteners also allow the fabric to be replaced. Being manufactured entirely without padding, Evo also helps to substantially reduce the use of chemicals. Its slender dimensions, low weight and wood frame mean Evo has a low carbon footprint. Evo is Möbelfakta certified.

## ABOUT EFG

The Swedish furniture company EFG has been producing high-quality, durable furniture for more than 135 years. EFG upholds form and function in our Scandinavian heritage and creates smart interior solutions that encourage people to work, meet and socialise. By designing flexible, long-lasting products, EFG drives the development of recyclable furniture and creates beloved products that are designed to last and be cherished. In line with EFG's design philosophy, the products feature a layer-by-layer design that allows components and upholstery to be replaced and repaired, making them easy to update over time.
